

CDC Statement on Pregnancy Health Advisory

Today, CDC issued an urgent health advisory to increase COVID-19 vaccination among people who are pregnant, recently pregnant (including those who are lactating), who are trying to become pregnant now, or who might become pregnant in the future to prevent serious illness, deaths, and adverse pregnancy outcomes.

The CDC health advisory [strongly recommends COVID-19 vaccination](#) either before or during pregnancy because the benefits of vaccination for both pregnant persons and their fetus or infant outweigh known or potential risks. Additionally, the advisory calls on health departments and clinicians to educate pregnant people on the benefits of vaccination and the safety of recommended vaccines.

According to CDC data, only 31 percent of pregnant people have been vaccinated against COVID-19 and vaccination rates vary markedly by race and ethnicity. Vaccination coverage is highest among Asian people who are pregnant (45.7 percent), but lower among Hispanic or Latino pregnant people (25 percent), and lowest among Black pregnant people (15.6 percent).

Through September 27th, there were more than [125,000 confirmed cases of COVID-19 in pregnant people](#) including more than 22,000 hospitalized and 161 deaths; of which, 22 deaths occurred in the month of August alone. Cases of COVID-19 in symptomatic, pregnant people have a two-fold risk of admission into intensive care and a 70 percent increased risk of death. Pregnant people with COVID-19 are at increased risk of adverse pregnancy outcomes that could include preterm birth, stillbirth, and admission into the ICU of a newborn also infected with COVID-19.

The advisory can be found at <https://emergency.cdc.gov/han/2021/han00453.asp>.
